

Database of NBAIR Accessions of Bacterial Biocontrol Agents

Name of the Depositor	Designation : Senior Scientist
Rajagopal Rangeshwaran	Affiliation : National Bureau of Agricultural Insect Resources ICAR)
Last First Middle	Bellary Road , H. A. Farm Post, Bengaluru-560024
	Phone : 080-23511998 ext. 356
	E mail : rangeshw@rediffmail.com
	Fax No. : 080-23411961
Name of the microorganisms	Type of culture : Bacterium
<i>Pseudomonas fluorescens</i> (NBAIAB-2)	
Details of source of culture	
Place of isolation (Habitat crop, plant or animals etc)	Tomato, Bangalore
Collection date	2001
Collected by	R. Rangeshwaran
District and state	Bangalore, Karnataka
Details of isolation	
Isolation by (Person and address)	R. Rangeshwaran, NBAIR, Bellary Road , H. A. Farm Post, Bangalore-560024
Isolation date	Rhizosphere
Specimen isolated from (eg. leaf) stem, root , soil, egg mass, insect, etc	
Growth and maintenance	
Medium of growth	King's B Agar
Medium for sporulation	
Optimum temperature for growth	28°C
Incubation time	48hrs
Subculture period	Two months
Special requirement for growth and sporulation, if any	
Identified by	R. Rangeshwaran
Geographical origin	South India

A brief description or distinctive features of the microorganism	Gram negative, short rods, plant growth promoter a biocontrol agent against soil borne diseases
Any record on RFLP/RAPD pattern or unique markers	-
Whether deposited microorganism is	<input type="checkbox"/> Agriculturally important
Taxonomic data	<input type="checkbox"/> Morphological, biochemical
Microorganism is deposited in	<input type="checkbox"/> In slants
Nature	<input type="checkbox"/> PGPR
IPR/paten information, if any	Nil
Provide accession number, if deposited elsewhere	Not deposited
Any other information	
Signature and date

Any record on RFLP/RAPD pattern or unique markers	SDS PAGE of crystal protein
Whether deposited microorganism is	<input type="checkbox"/> Agriculturally important
Taxonomic data	<input type="checkbox"/> Morphological, biochemical, toxicological, PCR
Microorganism is deposited in	<input type="checkbox"/> In slants
Nature	<input type="checkbox"/> Insect pathogen
IPR/paten information, if any	Nil
Provide accession number, if deposited elsewhere	Not Deposited
Any other information	
Signature and date	

Database of NBAII Accessions of Bacterial Biocontrol Agents

Name of the Depositor	Designation : Senior Scientist
Rajagopal Rangeswaran	Affiliation : National Bureau of Agricultural Insect Resources (ICAR)
Last First Middle	Bellary Road , H. A. Farm Post, Bangalore-560024
	Phone : 080-23511998 ext. 356
	E mail : rangeshw@rediffmail.com
	Fax No. : 080-23411961
Name of the microorganisms	Type of culture : Bacterium
<i>Bacillus thuringiensis</i> (NBAIIBT2)	
Details of source of culture	
Place of isolation (Habitat crop, plant or animals etc)	Western Ghat, Shimoga
Collection date	2007
Collected by	R. Rangeswaran
District and state	Shimoga, Karnataka
Details of isolation	
Isolation by (Person and address)	R. Rangeswaran, NBAII, Bellary Road , H. A. Farm Post, Bangalore-560024
Isolation date	Leaf tissue
Specimen isolated from (eg. leaf) stem, root , soil, egg mass, insect, etc	
Growth and maintenance	
Medium of growth	T3 medium
Optimum temperature for growth	28°C
Incubation time	48-72hrs
Subculture period	Two months
Special requirement for growth and sporulation, if any	

Identified by	R. Rangeshwaran
Geographical origin	South India
A brief description or distinctive features of the microorganism	Gram positive, bipyramidal crystal producer, spore former, insect pathogen against lepidopterans
Any record on RFLP/RAPD pattern or unique markers	SDS PAGE of crystal protein
Whether deposited microorganism is	<input type="checkbox"/> Agriculturally important
Taxonomic data	<input type="checkbox"/> Morphological, biochemical, toxicological, PCR
Microorganism is deposited in	<input type="checkbox"/> In slants
Nature	<input type="checkbox"/> Insect pathogen
IPR/paten information, if any	Nil
Provide accession number, if deposited elsewhere	Not Deposited
Any other information	
Signature and date
