

NBAIR scientists hold awareness campaign among farmers on the biological control of Bihar hairy caterpillar attacking potato crop

NBAIR scientists held an awareness campaign among farmers on the biological control of Spilosoma attacking potato crop (Yeluvahalli village in Chikkaballapur) utilising NPV. A severe incidence of the pest was observed and the farmers were trained on how NPV crude extract can be prepared, how it should be sprayed and how they can observe the disease incidence in the infected larvae within a week.
